

THE DREAM OF GREIVIN

FROM IDEA TO REALITY

WHO IS GREIWIN?

Hobbies

- Exploring new places
- Going to the gym
- Playing basketball
- Swimming
- Driving

Foods

- Pasta alla Gricia
- Ramen
- French Fries
- Grill Salmon
- Birria Tacos

TARGET SPECIALIZATION

Favorite Programming Languages

- C++
- C#
- Java (in progress)

From my time and
experience in Lasalle,
the specialization I have
enjoyed the most is
programming

LONG-TERM AMBITION

At the moment my goal is to secure a spot for myself in the industry. It can either be in the game industry or similar areas that require the programming knowledge I offer

Once I achieve my current goal, I can aim higher based on my position. I would like to one day be an engine programmer. Working with complex things that people often avoid

TARGET SECTOR

Entry target sector:

Gameplay Programmer

- Most common entry point
- Movement system
- Combat system
- UI logic
- Game rules

Dream target sector:

Engine Programmer

- Deeper understanding of C++ and experience require
- Build core tech for games
- Physics systems
- Rendering pipelines
- Optimization (FPS, memory)
- Custom engines

PREFERRED GAME GENRE

Applying to a job in 2026:

No preferred genres to
be honest, I will love to
work in any genre as
long as I secure my job
in the industry

SHORT-TERM COMPANIES

Skybox Labs

Intermediate C++
Software
Engineer in Game
Development
Studio

CAREER OBJECTIVES

- Strong believer of snoball effect
- Consistency and experience beats knowing everything

The only way I can achieve my end goal is by:

1. landing a job in the industry
2. gain experience and more knowledge
3. stay humble and social for networking
4. slowly move up in positions in the industry
5. finally landing an interview for that dream job

I try to keep my career goals as realistic as possible, I dont aim to land in the moon yet since I dont feel ready.

HOW TO STAND OUT?

1. Build systems not just games

- a. Custom physics system
- b. Basic AI (pathfinding, behavior trees)
- c. Memory management system (allocators, object pools)

2. Show understanding of performance

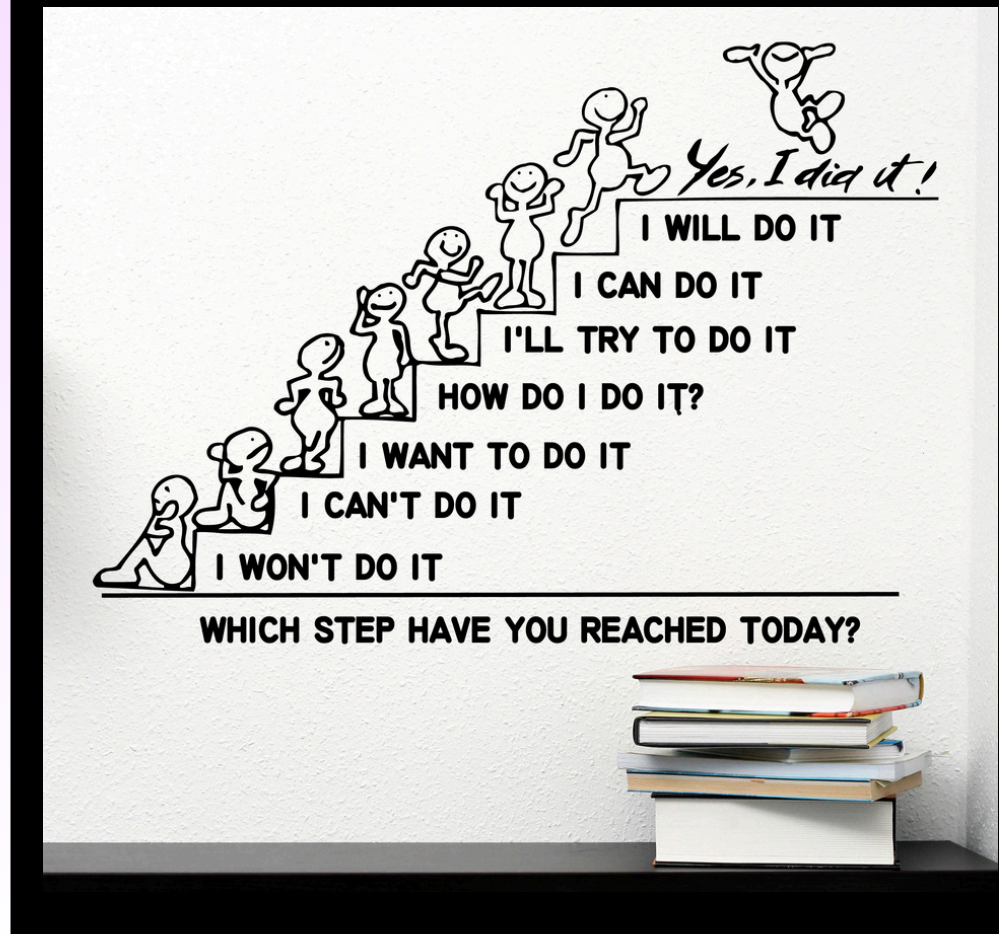

- a. make a game, and document the before and after performance enhance comparison

3. Make 2-3 strong in depth projects with C++, always keeping the code clean. "Quality Beats Quantity"

- a. Multiplayer system
- b. Physics sandbox
- c. AI-driven NPC system

4. Finally, save all this work and process in GitHub (MOST IMPORTANT)

- a. create a repository name personal projects and start from there
- b. pick one project to start with and slowly build your GitHub Portfolio up

Based on my
research

CURRENT STRENGTHS

1. Intermediate C++ knowledge
2. Intermediate C# knowledge
3. Hungry for knowledge
4. Bachelor in Game Programming
5. Fluent in 3 languages
6. Team projects documented in GitHub

CURRENT WEAKNESSES

1. C++ knowledge is not "industry-ready" yet
2. Need more knowledge of "deep systems" work
3. Limited performance/optimization experience
4. Not enough custom engine knowledge

THE PLAN

CURRENT SKILLS

1. Intermediate C++ knowledge
2. Intermediate C# knowledge
3. Basic Unreal knowledge
4. intermediate unity knowledge
5. Good time management
6. Good social skills

CURRENT AMBITIONS

1. A lot more C++ knowledge, specially in building my engine
2. Gain more Unreal knowledge since it is a C++ driven engine
3. Start good and dedicated projects, documenting everything in GitHub
4. Tackling what I lack by being honest with myself and working to understand why I lack that certain skill
5. Obtain a software/game programming internship within one year from today

THANK YOU
